

Gothenburg 6.10.2017

Dear Cresco®-customer!

When the Cresco system was once developed more than 20 years ago, it more or less revolutionized the dental industry as it solved most implant prosthetic problems such as angled screw channels, inadequate fits and high component costs. Founded on the passion for innovation and our deep knowledge, we have now developed the Cresco® system even further and turned the concept into a complete digital workflow named Elos Accurate®.

In recent years, the demand for Cresco products has decreased due to all new, innovative, digital solutions. We have now reached the point where we have decided to stop producing these components. **We will continue to sell the Cresco products we have in stock until May 15, 2018.** This means that products that are out of stock will not be available.

Elos Accurate® API®Bridge

Elos Accurate is a development of the Cresco system. Elos Accurate API Bridge is a bridge solution for a digital workflow with all the features from Cresco. All products within Elos Accurate are included in our Elos Accurate® Library. The libraries can be downloaded from our webpage and uploaded in the scanners 3Shape, Dental Wings and Exocad.

We have Elos Accurate API Bridge for the most common implant brands. Another benefit is that you – exactly as with the Cresco system – use one screwdriver regardless of implant manufacturer or platform.

Elos Accurate Webshop

To give the best service to customers we sell via distributors in Europe. In your country, we currently don't have a distributor. You can buy our products via our webshop. shop.elosmedtech.com

Electronic newsletter

Are you interested in receiving our electronic newsletter? You can sign up via our webpage or by sending an e-mail to: dentalsupport@elosmedtech.com

We are looking forward to a continued cooperation!

Best regards,

Robert Rudensjö
